Flight Fare Prediction

1. Abstract

The recent international things had a large impact on the aviation sector because of several reasons. This documentation is all about the user interface wireframe, here the home page of our flight fare prediction project is explained.

2. Web Interface

My web page is one single interface where both input from the user and the prediction is displayed.

3. User Input

Whenever the user hits my url, they first see the user input page here they have to provide the information like:

- Every user input has its own dropdown where the user can select their input.
- After providing the required input and pressing the submit button, the page refreshes and displays the output
